

Illinois Tollway Oases

Lighting Retrofit Case Study

Before

After

Customer: **Illinois Tollway Oases**
 Facility Type: **Tollway Oases**
 Annual Energy Savings: **53%**
 Payback Period: **1.64 years**

The Company

The Illinois Tollway Oases consist of seven travel plazas along the Illinois Highway. All locations offer a variety of food court options and services.

Of the six oases constructed conveniently over the tollway, five were chosen to receive a lighting upgrade and retrofit.

The Challenges

National Retrofitting Group received the bid to complete lighting retrofit projects at five Illinois Tollway Oases locations.

Installation was completed at night, minimizing impact to patrons, staff and vendors.

All fixtures were custom colored to match the existing aesthetics of each location. This allowed for a seamless transition from old to new fixtures.

The Results

National Retrofitting Group replaced over 500 inefficient fixtures throughout the five oases. The new efficient fixtures will cut lighting based energy usage by more than 50%.

The brighter, safer, and more sustainable oases can be seen lighting up the highway all along the Illinois Tollway.
